

Securing your Remote Workforce

Solving for COVID-19, Together.

Solution overview

We've witnessed a massive shift in the structure of our workforce with many more employees working from home. This has put strain on company's VPN and other infrastructure such as internet lines. This has also potentially increased the cyber security risk for these employees and companies.

Remote users need access to a number of systems such as internal corporate services, email communications, web browsing and last but not least secure and authorized access and usage of approved SaaS applications.

The remote workforce bundle ensures all of these threat vectors are covered.

BUSINESS BENEFITS

Unify your backup and disaster recovery strategy into a single solution and benefit from:

-  Work from home in a secure and effective manner
-  Email Security Services - Cloud Hosted Email Security
-  Cloud Access Security Broker - IaaS / SaaS Protection & Compliance
-  Secure Access Cloud - Secure remote access (HTTP/SSH/RDP)
-  Web Security Services - Cloud Hosted Web (Proxy) Security

Take a load off and boost security with Symantec's cloud-hosted solutions for remote access, email, web, and SaaS protection and compliance. Remove direct connections to your network and enable Zero Trust access for any user, from any device, and to any corporate resource.
