Building the future of Industry Enterprise Cloud Applications with Infor

As the third largest ERP provider in the world, Infor delivers business cloud software products to customers across 177 countries. These loyal clients are serviced by 17 000 Infor employees from 47 locations the world over, supported by 2015 partners globally.

The Secret to Infor's Success

Infor's success is attributed to its ambitious standards. Driven by a leadership team that ensures vision meets execution, Infor builds complete industry suites in the cloud. Its technology is efficiently deployed and consistently puts the user experience first. With solutions that leverage data science and integrate easily into existing systems, it's no wonder Infor is highly regarded by Gartner, the IDC and similar technology research and consulting companies.

Infor Evaluated: Impartial Evaluation Results

The multi-national enterprise software company, headquartered in New York City, has amassed innumerable positive evaluations. Most recently these include:

- Infor named a 2021 Gartner peer insights customers' choice for Enterprise Asset Management (EAM) by Gartner Inc.
- Gartner also recognises Infor as a leader in the 2021 Magic Quadrant™ for Cloud Enterprise Resource Planning (ERP) for product-centric enterprises
- Infor's Healthcare Interoperability solution continues to outperform the competition, confirms Black Book Research
- The IDC named Infor a major player in IDC MarketScape for Product Management Lifecycle solutions (PLM)

Innovative Approach to Cloud Solutions

Infor offers the only industry-specific, multi-tenant cloud ERP. Organisations worldwide in all industries are realising the value of cloud deployment as they strive to upgrade and modernise processes to be more competitive. Turning to a cloud-based solution is just the first step. It's also important to choose multi-tenant deployment to take advantage of the features that make cloud computing so attractive: agility, security, and the ability to adopt advanced AI-driven functionality.

According to Infor, happy multi-tenant customers frequently cite three main reasons for moving to the multi-tenant cloud, including:

- Built-in last-mile functionality, featuring standard business functionalities that are perfectly adapted to customers' equipment sales (including rental), spare parts management, procurement, and stock management issues
- SaaS features offering greater configuration for security, scalability, simplicity, and reliability
- Embedded analytics giving users control over the production of tables and reports, particularly by geographical area and by product

Industry Focus, Fit for Purpose

Infor's solutions are built with specific industries and verticals in mind. These offerings are adaptable and comprehensive, successfully driving better business results. Infor software applications are built on decades of experience in key industry verticals, by experts who understand the unique challenges in each sector. Infor Automotive, for example, effectively reduces supply chain complexity and improves the productivity of 800+ companies in the automotive industry across the globe.
